Genedata  
SOLUTIONS IN LIFE SCIENCE

# Genedata Ready-to-Run

## Extend Your Automation Capabilities

Genedata has partnered with HighRes Biosolutions to offer an integration allowing you to directly import HighRes-generated data into Genedata Screener®.

The joint solution offers:

- ▶ A streamlined process from experiment set-up and execution to data analysis
- ▶ Direct import of all relevant experiment information
- ▶ An automated, standardized, and scalable analysis workflow

The integration ensures that data from HighRes systems can easily be accessed in Genedata Screener, using both current and future software versions.

The Ready-to-Run integration covers:

- ▶ Cellario

## Activate your Genedata-HighRes Ready-to-Run integration:

Contact your Genedata Screener scientific account manager or your HighRes Biosolutions account manager.

## If you have one solution and would like to add the other, contact:

[sales@highresbio.com](mailto:sales@highresbio.com)  
[screener@genedata.com](mailto:screener@genedata.com)

## Genedata Ready-to-Run

Genedata Ready-to-Run provides out-of-the-box integrations for complex screening technologies. The integrations require little to no configuration, are instrument specific, come with defined functionality, and are maintained by Genedata as part of a software license agreement.

Go to [www.genedata.com/ready-to-run](http://www.genedata.com/ready-to-run) for the latest information on instruments integrated with Genedata Screener.

Genedata Screener® is part of the Genedata portfolio of advanced software solutions that serve the evolving needs of drug discovery, industrial biotechnology, and other life sciences.
